List of Symbols XXXIII

Synopsis Volume 4 XLIII

1	Overview of Solid Fuels, Characteristics and Origin 1
	<i>Toby G. Bridgeman, Jenny M. Jones, and Alan Williams</i>
1.1	Origin of the Solid Biomass and Fossil Fuels 1
1.1.1	Formation of Coal 1
1.1.2	Origin of Biomass Fuels 3
1.1.3	Peat 4
1.1.4	Derived Fuels and Waste or Opportunity Fuels 4
1.2	Availability and Resource Base of the Fossil and Biomass Fuels 5
1.2.1	Coal 5
1.2.2	Biomass 6
1.2.3	Peat 6
1.2.4	Waste Materials 6
1.3	Methods of Characterizing Solid Fuels 7
1.3.1	Proximate and Ultimate Analyses of Coals or Biomass 7
1.3.2	Calorific Value 8
1.3.3	Ash Composition 9
1.3.4	Ash Fusibility 9
1.3.5	Physical Properties 10
1.4	Physical and Chemical Properties of the Solid Fuels 10
1.4.1	Ultimate Analysis and Heating Value 11
1.4.2	Proximate Analysis 11
1.4.3	Ash 12
1.4.4	Classification 19
1.4.5	Reactivity of Solid Fuels 20

Contents

1.5	Handling and Preparation of the Fuels Prior to Use	24
1.5.1	Coal	24
1.5.2	Biomass	26
	References	29
2	Overview of Solid Fuels Combustion Technologies	31
	<i>Despina Varnvuka</i>	
2.1	Introduction	31
2.2	Coal Characteristics Affecting Combustion Processes	32
2.2.1	Coal Structure and Petrographic Composition	32
2.2.2	Organic Elements and Sulfur Content	33
2.2.3	Moisture and Volatile Matter Contents	33
2.2.4	Calorific Value	34
2.2.5	Agglomeration Properties	34
2.2.6	Ash Content and Composition	34
2.2.6.1	Effect on Ash Softening Temperature	34
2.2.6.2	Effect on Slag Viscosity	35
2.2.6.3	Effect on Fouling	35
2.3	Conventional Coal Combustion Technologies	36
2.3.1	Stokers	37
2.3.1.1	Spreader Stokers	38
2.3.1.2	Chain Grate Stokers	39
2.3.1.3	Vibrating Grate Stokers	39
2.3.1.4	Underfeed Stokers	39
2.3.2	Pulverized-Coal Furnaces	40
2.3.2.1	Dry-Bottom Furnaces	42
2.3.2.2	Wet-Bottom Furnaces	43
2.3.3	Cyclone Furnaces	45
2.4	Advanced Clean Coal Technologies	46
2.4.1	Fluidized-Bed Combustion	46
2.4.1.1	AFBC Process	47
2.4.1.1.1	Process and Key Issues	47
2.4.1.1.2	Current Status and Experience	49
2.4.1.1.3	Future Developments	50
2.4.1.2	PFBC Process	52
2.4.1.2.1	Process and Key Issues	52
2.4.1.2.2	Current Status and Experience	54
2.4.1.2.3	Future Developments	55
2.4.2	Supercritical Coal Combustion	56
2.4.2.1	Process and Key Issues	56
2.4.2.2	Current Status and Experience	57
2.4.2.3	Future Developments	58
2.4.3	<i>In Situ</i> Emissions Control Technologies	58
2.4.3.1	SO _x Control Technologies	58
2.4.3.2	NO _x Control Technologies	59

2.4.3.3	Near-Zero CO ₂ Emissions Technologies	62
2.5	Biomass Characteristics Affecting Combustion Processes	63
2.5.1	Moisture Content	63
2.5.2	Ash Content and Composition	63
2.5.3	Particle Size	64
2.6	Industrial Biomass Combustion Systems	64
2.6.1	Fixed Bed Systems	65
2.6.1.1	Grate Furnaces	65
2.6.1.2	Underfeed Stokers	69
2.6.2	Fluidized Bed Systems	71
2.6.2.1	Bubbling Fluidized Bed	71
2.6.2.2	Circulating Fluidized Bed	72
2.6.3	Dust Combustion Systems	74
2.7	Outlook	75
2.8	Summary	76
	References	78
3	Solid Biomass Combustion	85
	<i>Amit Suri and Masayuki Horio</i>	
3.1	Introduction	85
3.2	Solid Biomass Fuels	88
3.2.1	Variety of Biomass Fuels	88
3.2.2	Characterization of Biomass Fuels	92
3.2.2.1	Chemical Analysis	92
3.2.2.2	Ash Characterization	95
3.2.2.3	Ash Behavior	99
3.2.2.4	Bulk Density and Energy Density	102
3.2.2.5	Hardness	103
3.3	Principle of Solid Biomass Combustion	104
3.3.1	Drying and Pyrolysis of Wood	105
3.3.2	Effect of Heating Rate and Temperature on Products of Pyrolysis	107
3.3.3	Ignition, Combustion, and Extinction	108
3.3.4	Kinetics	110
3.3.4.1	Volatiles Combustion	110
3.3.4.2	Char Combustion	112
3.3.4.3	Effect of Shape Factor during Combustion	113
3.3.5	Gaseous Emissions	114
3.3.5.1	Nitrogen Oxides (NO _x)	114
3.3.5.2	Nitrous Oxide (N ₂ O)	117
3.3.5.3	Sulfur Oxides (SO ₂)	118
3.3.5.4	Hydrogen Chloride (HCl)	118
3.3.5.5	Heavy Metals and Dioxins	118
3.4	Combustion and Conversion Technologies	120
3.4.1	Large-Scale Boilers	120
3.4.1.1	Fixed Bed Combustion Systems	122

VIII Contents

3.4.1.1.1	Grate Furnaces	122
3.4.1.1.2	Stoker Furnaces	123
3.4.1.2	Fluidized Bed Combustion	124
3.4.1.2.1	Circulating Fluidized Bed	125
3.4.1.2.2	Bubbling Fluidized Bed	126
3.4.1.3	Entrained Bed Furnace	127
3.4.2	Small-Scale Boilers	128
3.4.2.1	Classical Cooking Stoves	128
3.4.2.2	Fireplace Heaters	128
3.4.2.3	Pellet Burners	128
3.4.2.4	Charcoal Combustion	129
3.5	Ash Behavior in Different Combustion Systems	131
3.5.1	Ash Behavior in Grate Furnaces	131
3.5.2	Ash Behavior in FBCs	133
3.6	Outlook	135
3.7	Summary	136
	References	136

4 Small-Scale Biomass Combustion 141

Matthias Gaderer, Florian Volz, and Robert Kunde

4.1	Introduction and Summary	141
4.2	Biomass Fuels	142
4.3	Biomass Combustion Techniques	143
4.3.1	Combustion Process	143
4.3.2	Manually Operated Systems	144
4.3.2.1	Log Wood Combustor Systems	144
4.3.2.1.1	Updraft Combustion with Complete Combustion	144
4.3.2.1.2	Updraft Combustion with Top-Burnout	145
4.3.2.1.3	Downdraft Combustion with Bottom or Lateral Burnout	146
4.3.2.2	Log Wood Fired Heating Systems	147
4.3.2.2.1	Fireplace	147
4.3.2.2.2	Stoves	149
4.3.2.2.3	Tule Stove, Heat-Storing Stoves	150
4.3.2.2.4	Central Heating Boilers	151
4.3.3	Automatically Fed Combustors	153
4.3.3.1	Combustion Concepts for Automatically Fed Firing Systems	156
4.3.3.1.1	Underfed Firing	156
4.3.3.1.2	Horizontally Fed Furnace Systems or So-called Stokers	157
4.3.3.1.3	Drop-Shaft Firing	158
4.3.3.2	Automatically Operated Wood Chip and Pellet Heating Systems	158
4.3.3.2.1	Stoves for the Combustion of Wood Pellet	158
4.3.3.2.2	Central Heating Boilers for Wood Pellet and Wood Chips	160
4.4	Emissions	165
4.5	Electricity Production and Combined Heat and Power	167
	References	168

5	Coal Combustion 171
	<i>Monika Kosowska-Golachowska</i>
5.1	Introduction 171
5.2	Description of Combustion of a Single Coal Particle 172
5.2.1	Heating and Drying 172
5.2.2	Ignition of Volatiles 174
5.2.3	Devolatilization and Volatile Combustion 175
5.2.4	Char Combustion 179
5.2.4.1	Mechanisms of Combustion of Non-Porous Char 180
5.2.4.2	Mechanisms of Combustion of Porous Char 181
5.2.4.3	Burning Rate 182
5.2.4.4	Time of Char Combustion 182
5.2.5	Fragmentation of a Coal Particle 182
5.3	Experimental Research into Combustion of a Single Coal Particle 184
5.3.1	Test Apparatus 185
5.3.2	Test Procedure 186
5.3.3	Coals Tested 186
5.3.4	Thermal Fragmentation of Coal 186
5.3.4.1	Effect of Coal Type 187
5.3.4.2	Effect of Particle Diameter 191
5.3.4.3	Influence of Bed Temperature 191
5.3.5	Evolution of Coal Structure during Combustion 192
5.4	Mathematical Model of Primary Fragmentation 198
5.4.1	Coal Heating 199
5.4.2	Volatile Release 201
5.4.3	Volatile Transport 202
5.4.4	Primary Fragmentation 202
5.4.5	Results of Numerical Simulations 203
5.4.6	Verification of the Model 206
5.5	Applications of Coal Combustion in Industry 209
5.6	Outlook 211
5.7	Summary 212
	References 213
6	Pulverized Coal-Fired Boilers 217
	<i>Hai Zhang and Junfu Lu</i>
6.1	Introduction 217
6.1.1	PC Combustion and PC Fired Boiler 217
6.1.2	Physical Properties of PC Particles 220
6.1.3	Conventional Layout of a PC Boiler 221
6.1.4	Heating Surfaces and Water-Vapor Path in a PC Boiler 223
6.1.5	Heat Transfer Calculation Procedure of a PC Boiler 224
6.2	Some Theories 226
6.2.1	Theoretical Air and Coefficient of Excess Air 226
6.2.2	Heat Balance and Efficiency of a PC Boiler 227

✕ Contents

6.2.3	Ignition of PC Particles	229
6.2.4	Char Combustion	232
6.2.5	NO _x Formation Mechanisms	232
6.2.5.1	Thermal NO	233
6.2.5.2	Fuel NO	234
6.3	PC Fired Furnace	235
6.3.1	Furnace Layout and Firing Type	235
6.3.2	Cross-Section Heat Release Rates Selection	237
6.3.3	Volumetric Heat Release Rates Selection	238
6.3.4	Empirical Heat Transfer Calculation in the Furnace	238
6.3.4.1	General Introduction	238
6.3.4.2	Heat Input to the Furnace	239
6.3.4.3	Emissivity of the Flame and the Furnace	240
6.3.4.4	Empirical Heat Transfer Calculation in the Furnace	241
6.4	PC Fired Burners	243
6.4.1	General Introduction	243
6.4.2	Arrangement of Burners	244
6.4.3	Low NO _x burners (LNB)	247
6.4.4	Examples of LNBs	248
6.4.4.1	Boat-Shaped Bluff-Body Burner	248
6.4.4.2	Double PA Channel Burner	248
6.4.4.3	DRB Burner	249
6.4.4.4	WR Burner	250
6.4.4.5	PM Burner and Vertical Rich/Lean	250
6.4.4.6	Louver Damper Burner and Bias Combustion	251
6.4.4.7	In-Furnace HTAC Burner	251
6.5	Outlook	253
6.6	Summary	254
	References	254
7	Modeling Moving and Fixed Bed Combustion	257
	<i>Bernhard Peters and Harald Raupenstrauch</i>	
7.1	Introduction	257
7.1.1	Combustion Characteristics of an Individual Particle	257
7.1.2	Combustion Characteristics of a Fixed or Moving Bed	258
7.1.3	Conversion Regimes	259
7.1.4	Classification of Model Approaches	260
7.2	Modeling Approach	262
7.2.1	Conversion	262
7.2.1.1	Drying	263
7.2.1.2	Pyrolysis and Devolatilization	263
7.2.1.3	Gasification and Combustion	265
7.2.2	Transport of Fuel Particles	266
7.2.3	Gas Flow	267

7.3	Applications 268
7.3.1	Conversion 268
7.3.1.1	Drying 268
7.3.1.2	Pyrolysis and Devolatilization 269
7.3.1.3	Gasification and Combustion 271
7.3.1.3.1	Grate: Optimal Conditions for Fuel Ignition and Optimal Primary Air Load 272
7.3.2	Transport an a Grate and in a Rotary Kiln 277
7.3.2.1	Grate 277
7.3.2.2	Rotary Kiln 279
7.4	Outlook 279
7.5	Summary 280

8 Waste Combustion, MSW, Sewage Sludge, Hazardous, Grate and Rotary Kiln 285

Helmut Seifert and Jürgen Vehlow

8.1	Introduction 285
8.2	Objectives of Thermal Waste Treatment 285
8.3	Basic Processes for Thermal Waste Treatment 286
8.4	Waste Incineration Processes 287
8.5	Incineration of Municipal Solid Waste 288
8.5.1	Generation and Quality of Municipal Solid Waste 288
8.5.2	Management of Municipal Solid Waste 289
8.5.3	Grate-Based Waste Incinerators 289
8.5.3.1	Elements and Design of Grate Furnaces 291
8.5.3.2	Grate Types 292
8.5.3.3	Travelling Grates 292
8.5.3.3.1	Roller Grates 292
8.5.3.3.2	Reciprocating Grates 293
8.5.3.4	Fundamentals of Fuel Technology 295
8.5.3.4.1	Waste Characteristics 295
8.5.3.4.2	Specific Combustion Parameters 297
8.5.3.4.3	Design of a Grate Fired Furnace 299
8.6	Material Partitioning Inside the Furnace 300
8.7	Air Pollution Control 301
8.7.1	Flue Gas Quality 301
8.7.2	Air Emission Regulations 302
8.7.3	Process Stages 304
8.7.4	Particle Removal 304
8.7.5	Chemical Gas Cleaning 305
8.7.5.1	Wet Scrubbing 306
8.7.5.2	Dry Scrubbing 307
8.7.5.3	NO _x Abatement 308
8.7.5.4	Control of Dioxins 308

8.7.6	Quality of Emissions 309
8.8	Solid Residues 310
8.8.1	Mass Flows in a Waste Incinerator 310
8.8.2	Management of Bottom Ashes 311
8.8.2.1	Characterization 311
8.8.2.2	Pretreatment for Utilization 311
8.8.2.3	Utilization and Environmental Compatibility 311
8.9	Management of Boiler and Filter Ashes and APC Residues 313
8.9.1	Boiler and Filter Ashes 313
8.9.2	APC Residues 315
8.10	Hazardous Waste Combustion in Rotary Kiln Furnaces 315
8.11	Sewage Sludge Incineration in Fluidized Bed Furnaces 316
8.12	Alternative Processes for Thermal Waste Treatment 317
8.13	Summary 319 References 319
9	Gasification and Pyrolysis of Coal 325 <i>Adam Luckos, Mohammed N. Shaik, and Johan C. van Dyk</i>
9.1	Introduction 325
9.2	Fundamentals of Coal Gasification Technology 326
9.3	Pyrolysis and Gasification Chemistry 328
9.3.1	Pyrolysis 328
9.3.2	Stoichiometry and Thermodynamics of Gasification 331
9.3.3	Kinetics of Gasification Reactions 333
9.4	Coal Gasification Technologies 334
9.4.1	Fixed-Bed Gasifiers 335
9.4.1.1	Fixed-Bed Dry-Bottom (FBDB) Process 336
9.4.1.2	British Gas/Lurgi Process 338
9.4.2	Fluidized-Bed Gasifiers 339
9.4.2.1	High Temperature Winkler Process 340
9.4.2.2	Kellogg Rust Westinghouse Process 342
9.4.2.3	Kellogg Brown Root Transport Gasifier 343
9.4.3	Entrained-Flow Gasifiers 345
9.4.3.1	Shell Coal Gasification Process 345
9.4.3.2	Prenflo Gasification Process 348
9.4.3.3	General Electric Coal Gasification Process 350
9.4.3.4	Conoco-Phillips E-Gas Gasification Process 351
9.4.3.5	Mitsubishi Heavy Industries Coal Gasification Process 352
9.4.3.6	Siemens Fuel Gasification Technology 355
9.4.4	Other Gasification Technologies 356
9.4.4.1	Opposed Multi-Burner (OMB) Gasification Technology 356
9.4.4.2	Pratt and Whitney Rocketdyne (PWR) Gasification Technology 357

9.4.4.3	Plasma Gasification	357
9.4.4.4	Underground Coal Gasification	357
9.5	Outlook	358
9.6	Summary	359
